CEREN SELÇUK

ELECTRONICS AND COMMUNICATION ENGINEERING STUDENT
ISTANBUL TECHNICAL UNIVERSITY

İstanbul | 0532 293 4800 | ceren.slck.55@gmail.com | linkedin.com/in/ceren-selçuk-592747298
Portfolio: crnselcuk.github.io/ceren-portfolio

I am an aspiring engineer with a passion for hardware design, embedded systems and avionics. Alongside my studies, I have gained practical knowledge, teamwork and leadership experience through project teams, field tests and internships in Türkiye and abroad, and I aim to take part in hardware development and testing processes in these areas.

EDUCATION

Electronics and Communication Engineering, B.Sc. **September 2023 – Present**
Istanbul Technical University

- Acquired fundamental knowledge in electronics and communication engineering, and actively took part in technical teams to apply it in practice.
- GPA: 2.84

EXPERIENCE

Working Student, Puura Aerospace **October 2024 – Present**

- Working on rocket development systems.
- Took part in the development of a work that was prepared as a scientific paper.

Embedded Systems Intern, TUM Chair of Astrodynamics **August 2026 – October 2026**

- Developed STM32 firmware for the Floating Spacecraft Simulator (FSS).
- Built a ROS 2-based flight software stack on Raspberry Pi and validated the system in hardware tests.

PLD Intern, ASELSAN **June 2026 – July 2026**

- Strengthened my hardware-side knowledge of communication protocols in the Avionics and Guidance Department.
- Had the chance to use Vivado.

Hardware Design Intern, Andasis Technopark **August 2025 – September 2025**

- In my first internship, I observed the company's working structure and engineering project management processes.
- Applied the knowledge and experience gained at the company to start an avionics design project that I am still developing.

Electronics Team Leader, Pars Rocket Group **December 2024 – June 2025**

- Planned project follow-up, task distribution and testing processes together with the electronics team.
- Maintained cross-disciplinary communication throughout rocket development, field preparation and integration processes to ensure flight readiness.

Electronics Team Member, Pars Rocket Group **October 2023 – December 2024**

- Contributed to the development of the onboard flight computer as part of the avionics team.
- Participated in the production, integration and field testing of avionics and data acquisition systems.

PROJECTS

Development of Avionics Board Used in Flight

- Developed an STM32-based avionics system incorporating IMU, barometer and GPS sensors for rocket flights.
- Designed multi-layer PCBs and hierarchical schematics using Altium Designer.
- Participated in system tests during engine tests and launch procedures.

Teknofest Original Hybrid Motor Rocket Category

- Played an active role in writing the Preliminary Design Report (PDR) and Critical Design Report (CDR), and in managing the related processes.
- Contributed to the design of the avionics board used in the launch.

Data Acquisition System (DAS) for Static Tests

- Worked on reading, evaluating and integrating data from components such as industrial pressure sensors and load cells.

SKILLS

- **Language:** English (C1)
- **Technical:** Altium Designer, MATLAB/Simulink/Simscape, LTspice, STM32/Embedded C, ROS 2, Raspberry Pi, Vivado, Git, Project and Team Management
